UNIVERSITY OF BRISTOL
WINDSURFING CLUB

UBWC Kit: Quick Guide

The club's kit app. Find kit, rig it, put it back, and log how it went.

Get set up

1. Open the link the committee shared, on your phone. Then add it to your home screen: **Share** → **Add to Home Screen** on iPhone, ⋮ → **Add to Home screen** on Android.
2. Tap the round button at the top right and **Create an account**. You can browse without one, but you need it to rig, log, rate or report. Forgotten your password? Ask a committee member to reset it.
3. Tap the location pill (**All locations**) and pick where you're sailing, e.g. **Cheddar**. The app then only shows kit that's there.

Choosing where you are

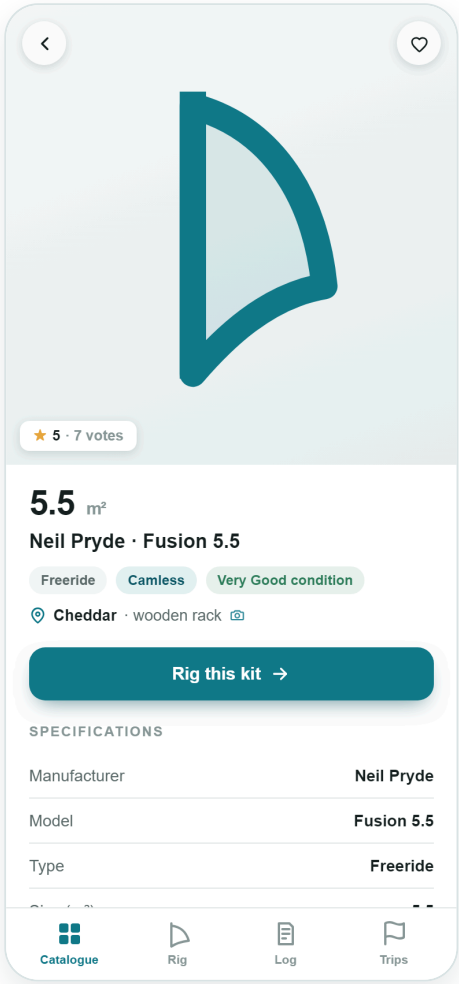

1 Find kit

The **Catalogue** tab lists all the kit at your location.

- **Search** by brand, model or size.
- Tap a **type** (Boards, Sails…) to show just that.
- The **funnel** icon opens filters and sorting.
- Tap any piece to open its page.
- The item page shows its size, specs, **where it lives**, ratings, and notes from other members.
- ⚠ Fault means there's a known problem. Read it before you use the kit.
- Greyed-out kit is away on a club trip.

The Catalogue

A piece of kit

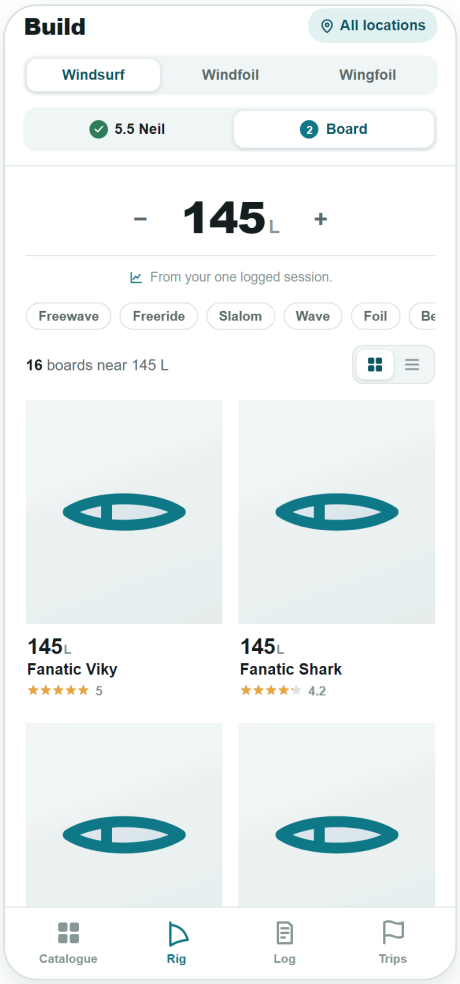

Can't find something?

Check the location pill at the top. Kit with a **major** fault is hidden too, until you tick **Major faults** in the filters.

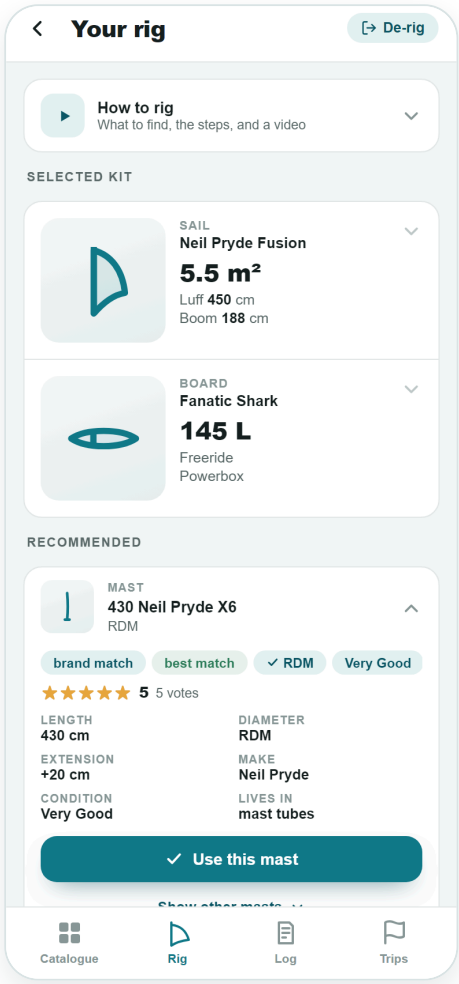

2 Rig up

The **Rig** tab picks a mast, extension, boom and fin that fit your sail and board.

1. Choose **Windsurf**, **Windfoil** or **Wingfoil**.
2. Set a sail size with − / + and tap the sail you want. Then do the same for a board.
3. On **Your rig**, tap each recommended part to see where it's kept, then **Use this**. Use **Show other…** if you'd rather have a different one.
4. New to rigging? Open **How to rig** at the top for the steps and a video.

Picking a board

Your rig

Cambered sail?

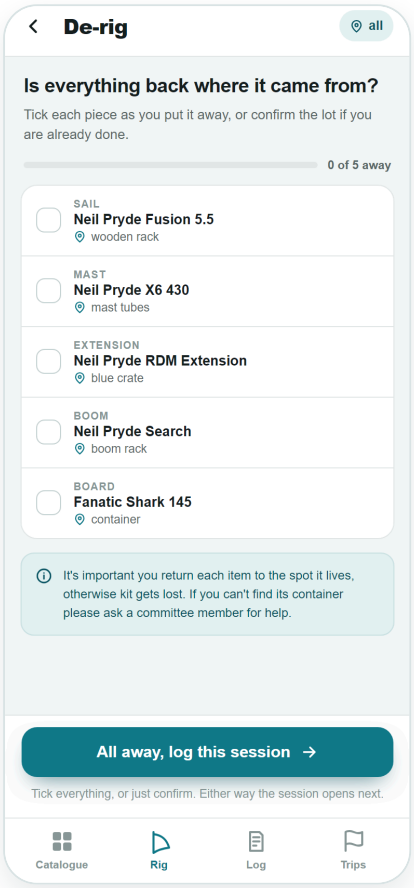

If you haven't rigged cams before, grab a committee member first.

3 Put it away and log it

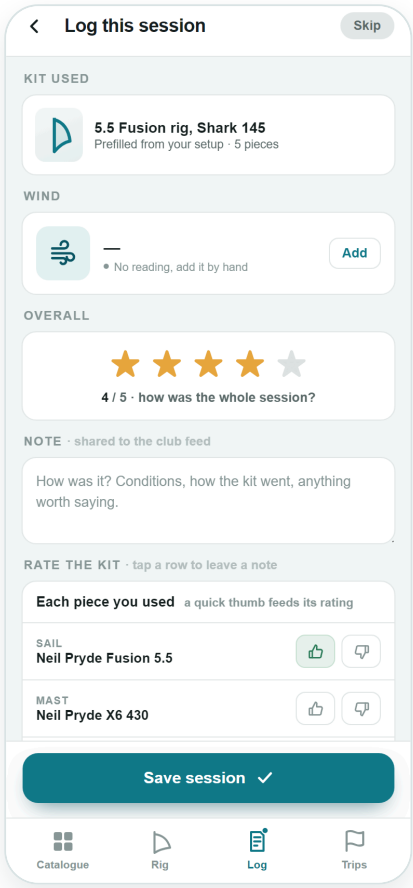

When you come off the water, tap **De-rig** at the top right of Your rig.

1. The checklist shows **where each piece lives**. Put everything back there, then tap **All away, log this session**.
2. Give the session **1–5 stars**. That's the only thing you have to do. Check the wind, and add a note if you like.
3. Give each piece a quick 👍 **or** 👎. This helps everyone find good kit. Then tap **Save session**.

Not now? Tap **Skip**, and the **Log** tab shows a dot until you come back to it.

The de-rig checklist

Logging the session

Always put kit back where it lives

Otherwise the next person can't find it. If you're not sure where something goes, ask a committee member.

4 Faults and trips

Something broken?

Open the kit's page and tap **Report a fault**. Give it a short name, say what's wrong, and add a photo if you can. Then choose:

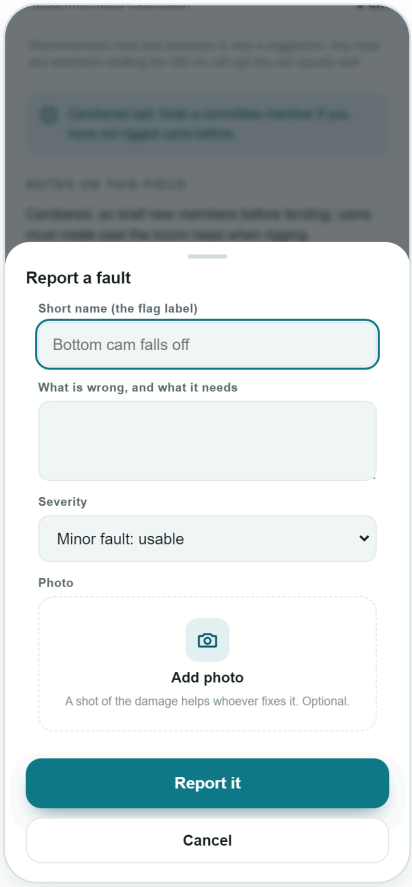

- Minor still usable, but needs a warning
- Major out of action, don't use it

If in doubt, pick **Major** and tell a committee member. Fixed something? Open the fault and tap **Report a fix**. The committee will check it and close the fault.

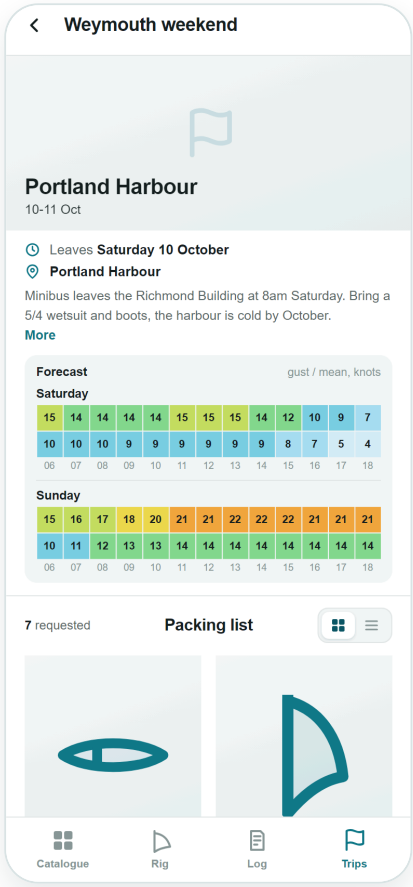

Going on a trip?

Open an **Upcoming** trip in the **Trips** tab to see the plan and the wind forecast. Tap **Request kit** and pick the sail or board you'd like. Your initial goes on it, so the kit secretary knows who wants what.

A request doesn't reserve anything: the committee decides the final list. Long-press your request to withdraw it.

Reporting a fault

A trip taking requests

Need something else?

Adding or editing kit, closing faults and running trips are all done by the committee. Just ask.
